Client:

The company is developing a first-in-class compound that is in Phase III clinical trials for the treatment of irritable bowel syndrome with constipation, chronic constipation, and other lower gastrointestinal conditions. It also focuses on the research and development of early stage product candidates and preclinical research in various therapeutic areas, including gastrointestinal disease, pain and inflammation, respiratory disease, and cardiovascular disease.

Objectives:

- Manage the analytical needs for late-stage clinical projects for drug substance and drug product
- Maintain and improve analytical methods, including: in-process testing, drug substance release, drug product release, and reference standard qualification
- Oversee analytical methods transfers and validations between CROs and CMOs
